ACKNOWLEDGMENTS—This report was prepared under the direction of **Gaylord Worden,** Chief of the Industry Division. **Joanne Katz.** Assistant Division Chief for Economic Indicator Programs, provided overall guidance for this report.

Within the Industry Division, the preparation of this report was performed under the supervision of **Ruth Runyan,** Chief, Shipments, Inventories, and Orders Branch, assisted by **Kathleen Menth,** and **Gloria Cable.** Other contributing industry analysts include **Jeffrey Brister, Ronald Danna, Susan Davis, Indrek Grabbi, Henry Haurand, Catherine Knudsen, Suzanne Munday, Ruth Renwick,** and **Eddie Salyers.** The assistance of **Gladys Archer, Lucy Cardellino, David Cooper, Ann Johnson, Alice Miller,** and **Nina Gressens** is also appreciated.

Lillie Mae Skinner coordinated the various phases of the publication process.

The electronic computer programs were developed under the direction of **William Norfolk,** Assistant Chief for Operations, assisted by **Chuck Woods.** Other contributing industry programmers include **Alan Seto, Anne Linonis,** and **Kim Crispin.**

Finally, a special acknowledgment is due to the many businesses whose cooperation was essential to the success of this report.

Address inquiries concerning this report to the U.S. Department of Commerce, Bureau of the Census, Industry Division, Washington, D.C. 20233, or call **Ruth Runyan** or **Kathleen Menth,** (301) 763-2502.

Introduction

SUMMARY

The monthly data in the Manufacturers' Shipments, Inventories, and Orders Survey for 1978 to 1984 have been revised to reflect (1) updating of the seasonal adjustment factors and (2) corrections for reports received too late to include in the monthly publications. The next monthly report issued in the M3 series will contain revised monthly data for 1985 and will be consistent with the data shown in this publication.

Revisions to previously published seasonally adjusted data, resulting from the addition of 1984 survey data to the calculation of seasonal adjustment factors, are generally small. The total change for all manufacturing industries for 1984 was an average of .07 percent per month for new orders, .07 percent per month for shipments, .18 percent per month for unfilled orders, and .03 percent per month for inventories.

Data for 1972 through 1984 were used in the calculation of the new historical and forecasted seasonal factors. This is a change from prior years when data for the entire series which extends to 1958 were included in the calculation of these factors. The omission of these earlier data caused virtually no change in the calculation of the current and forecasted factors. No data prior to 1978 have been revised or republished due to the insignificance of the revisions.

Data for the entire historical M3 series, 1958 through 1984, both seasonally adjusted and unadjusted, are available for purchase on computer tape from the Data User Services Division (DUSD) of the Bureau of the Census.

DESCRIPTION OF SURVEY

The Manufacturers' Shipments, Inventories, and Orders survey provides broad-based monthly statistical data on economic conditions in the domestic manufacturing sector. It is designed to measure current industrial activity and to provide an indication of future trends. The data are used extensively by the executive branch of the Government in developing economic, fiscal, and monetary policy; by the Bureau of Economic Analysis as components of the gross national product estimates; and by trade associations, corporate economists, and other members of the business community as an analytical tool in their assessment of the current and future economic condition of the country.

Composition of the Survey Panel

The monthly M3 estimates through 1984 are based on information obtained from most manufacturing companies with 1,000 or more employees. In addition, selected smaller companies are included to strengthen the sample coverage in individual industry categories. For firms that operate in a single M3 industry category, the reporting unit typically comprises all operations of the company. At the request of the Census Bureau most large, diversified companies file separate reports for divisions that operate in different industrial areas.

Each company or reporting unit of a company in the survey is classified into 1 of 79 industry categories for which separate estimates are made (see appendix B) based on the major activity of the reporting unit. Some reporting units include industry activities outside the M3 category in which they are classified. The survey methodology assumes that the month-to-month changes of the reporting units classified in each industry category effectively represent the month-to-month movements of the establishments in the Standard Industrial Classification (SIC) industries which make up the category.

The sample selected in 1962 for this survey included all companies with more than 1,000 employees. Smaller companies were sampled proportional to their employment size. Because of poor response rates, reporting by companies with less than 100 employees was discontinued in 1963, and instead, data for these companies were estimated by using overall industry averages.

There was also some deterioration in response rates for companies with between 100 and 1,000 employees. Therefore, in January 1975, a supplemental sample of approximately 1,000 companies was selected from the universe of companies in this size range in order to strengthen the estimates. Although the response rate was only about 60 percent for this group, beginning with January 1978, reports from responding companies in this sample are included in the monthly estimates.

The current coverage levels in the survey show that approximately 50 to 55 percent of the shipments estimates at the all manufacturing level are based on reported data, while the individual coverage rates for the 20 two-digit major SIC industries vary from about 20 to 90 percent.

Monthly Estimation Procedure

The monthly estimates of shipments, unfilled orders, and total inventories are derived for each industry category by multiplying the industry estimate for the previous month by the percentage change from the previous month for companies reporting in the current month.

From time to time an individual company might report unusually large changes from the previous month, differing substantially from the movement shown by the rest of the re-

porting panel. An example of this is the effect of a strike upon an individual company's data. Such extreme movements are isolated from the estimation procedure as follows: the data for the individual company are removed from the computation of the aggregate month-to-month percentage change and from the prior month's industry estimate; the modified percentage change is then applied to the reduced prior month's estimate, giving a current month's estimate of the entire industry excluding the company with the unusual month-to-month change; finally the company's reported data are added to the modified current month's estimate to obtain the estimate for the entire industry. The effect of this procedure is to restrict the basis of estimation for nonrespondents and firms not in the survey panel to the general trend of the industry.

Though collected as a separate item, new orders are not calculated according to the standard ratio-estimate procedure. The reason for this is that not all companies report new orders, and some that do report this item limit their reporting to specific products for which long lead times are required in the production cycle. These companies, in effect, exclude new orders received for products that are shipped from inventory. To take advantage of the higher response rate for shipments data and to include orders filled from inventory, new orders are computed by adjusting the current month's shipments by the change in the backlog of orders. (New orders equal current month shipments plus current month unfilled orders minus prior month unfilled orders.) Thus, the estimate of new orders includes orders that are received and filled in the same month as well as orders that have not yet been filled. Also included are the effects of cancellations and modifications of previously reported orders.

The estimation of total inventories follows the procedure described for shipments and unfilled orders. However, because a significant number of companies that report total inventories cannot report inventories by stage of fabrication, a modified procedure is used to estimate the stage-of-fabrication data. In this procedure, the inventory totals previously estimated are cumulated to two-digit SIC major group levels and serve as control totals for the stage-of-fabrication data. Initial estimates by stage of fabrication are made for each two-digit SIC based on the link-relative method for reporting companies; the differences between the sum of the stage-of-fabrication detail and total inventories are then allocated proportionally to the stage-of-fabrication figures to form the estimates.

Seasonal Adjustment Methodology

The monthly data are adjusted for seasonality at the most detailed level tabulated in the survey, using the X-11 variant of the Census Bureau's seasonal adjustment program.[1] The seasonally adjusted estimates for shipments, unfilled orders, and total inventories for each M3 industry category are calculated by dividing the unadjusted estimates by a seasonal adjustment factor previously computed by the X-11 seasonal adjustment program.

Seasonally adjusted new orders are computed by adjusting the current month's seasonally adjusted shipments by the change in the seasonally adjusted unfilled orders. This procedure preserves the definitional identify among shipments, unfilled orders, and new orders, although it will yield seasonally adjusted new orders estimates which differ slightly from an independent seasonal adjustment of new orders.

The inventory by stage of fabrication data are seasonally adjusted at the two-digit SIC major group level and then summed to total inventory estimates. If the summed data do not equal the SIC major group totals resulting from summing the seasonally adjusted total inventories for the individual industries, the difference is proportionally allocated to the stage-of-fabrication detail.

For information on specific measures used in the seasonal adjustment analysis and selection of options within the X-11 program for the individual industry series, contact the Industry Division, Bureau of the Census, Washington, D.C. 20233.

Trading-Day Adjustment Factors

Variations in the rate of activity that arise from the existence of different numbers of trading days in the same month for different years can be an important cause of month-to-month irregular fluctuations (such as unexpected economic developments, unusual weather, and statistical errors). Trading-day irregularities can be approximately identified and removed so that the underlying trend-cycle stands out more clearly.

The M3 survey does not use the trading-day adjustment option in the X-11 program, but rather adjusts the shipments data for monthly trading-day variations in the individual reports prior to tabulation. At the same time, the reports are adjusted for variations in the length of the report periods of companies. In effect, all reports are adjusted to reflect manufacturing shipments for one-twelfth of a year, or a standard month of approximately 26 trading days. (The number of trading days used in the tobacco, pulp and paperboard, and newspaper and periodicals industries varies slightly.) These composite adjustment factors are found in appendix C. Trading-day adjustments are reflected in both the seasonally adjusted and unadjusted published data.

Limitations of the Data

The monthly data presented in this publication are subject to both sampling and nonsampling errors. Sampling errors occur because reports are received from a sample rather than from the complete universe of manufacturing companies. Because of the present composition of the sample, the amount of sampling error cannot be quantified. Nonsampling errors, on the other hand, are attributable to many sources. The use of company or divisional reports to estimate the monthly change for establishments is one source of nonsampling error. In addition, response and processing errors may be present, although most of the important errors of this kind are detected through computer edits of the data prior to tabulation and through analytical review of the data prior to publication.

REVISIONS TO PREVIOUSLY PUBLISHED DATA

Benchmark Procedure for Shipments and Inventories

The estimates of annual shipments and end-of-year inventories derived from the monthly survey are benchmarked to the annual totals compiled in the Census of Manufactures and in the ASM as those data become available. The benchmarking adjusts for any differences that result from collecting the monthly data on a divisional or company basis as compared to the establishment basis used in both the ASM and the Census of Manufactures. It also corrects for errors of estimation from the relatively small monthly survey and for any reporting or processing errors that may not have been detected as part of the review of the monthly estimates. The last benchmark report was issued in May 1983 and included M3 data benchmarked to the annual data through 1981. The next benchmark report will include M3 data benchmarked to the 1982 Census of Manufactures and the 1983 ASM.

Revisions to New and Unfilled Orders

Annual benchmark data for unfilled orders are not available from a larger scale survey as they are for shipments and inventories. In order to adjust the estimates where necessary, the unfilled orders levels are examined periodically to identify areas where:

a. The unfilled orders to shipments ratios change substantially.
b. The composition of the reporting panel changes such that the industry or product mix represented by the reporting companies is altered.
c. A large number of companies report monthly shipments but not end-of-month unfilled orders. This problem occurs when companies produce for stock rather than order, do not calculate backlog levels monthly, or carry only physical volume backlogs monthly, e.g., tons of steel on order.

The last systematic adjustment to the unfilled orders series was made to the December 1981 data and was included in the annual report issued in May 1983. The next systematic adjustment to unfilled orders levels will be included in the next benchmark report.

Since new orders for any period are defined as the change in unfilled orders between the current and previous periods, plus the current period shipments, a revision in either of the basic series will result in a change in the new orders estimates.

DEFINITION OF TERMS

Value of Shipments

Value of shipments as reported in the ASM represents net selling values, f.o.b. plant, after discounts and allowances and excluding freight charges and excise taxes. These shipments are classified and tabulated at a four-digit Standard Industrial Classification (SIC) level. Where the products of an industry (four-digit SIC) are customarily delivered by the manufacturing establishment (such as in certain food industries–fluid milk, bakery products, soft drinks), the value is based on delivered price rather than the f.o.b. plant price. In the annual survey, multiestablishment companies report value information for each plant as if it were a separate economic unit. Thus, products transferred from one plant to another are reported at their full economic value; i.e., in addition to the cost of production, a reasonable proportion of company overhead and profits are included.

Included in the value of shipments, in addition to the value of products made at the plant, is the value of products made elsewhere under contract from materials owned by the plant. Also included is the value of all products transferred to other plants of the same company or shipped on consignment. Receipts for contract work performed for others, resales, miscellaneous activities such as the sale of scrap and refuse, installation and repair work performed by employees of the plant, and the value of research and development performed at the plant are also included.

In the shipbuilding industry, the value of work done in a given year varies considerably from the value of shipments because of the long lead time between the start and completion of a large vessel. In the annual survey, the value of work done during the year, rather than the value of shipments, is included. The same procedure is followed for aircraft produced on a cost-plus contract. Aircraft produced on a fixed-price contract are reported in the usual manner when the products are shipped. Where value of work done is reported in place of shipments, the work-in-process inventories are normally charged to the customer as cost are incurred and are not accumulated as finished goods inventories by the shipyard or the aircraft producer.

The value of shipments figures developed from the ASM contain duplication at the all manufacturing and M3 industry category levels, since the products of some four-digit SIC industries are used as materials by other industries within the same industry aggregate. The significance of the duplication within the specific M3 industry categories varies depending on their four-digit industry composition. It is most pronounced in a few highly integrated industry areas, such as primary metals and motor vehicles and parts.

For multiunit companies, the M3 reports received each month typically are not plant reports but are company or divisional level reports that encompass groups of plants. The actual sales reported are usually net sales and receipts from customers and exclude the duplication of interplant transfers. The reported sales are used to calculate month-to-month changes which bring forward the plant-based shipments for the industry category as estimated in the ASM.

Inventories

In the ASM, until 1982, respondents were asked to report their inventories at book values. Since different methods of

inventory valuation are used (LIFO, FIFO, etc.), the definition of the value of aggregate inventories for all plants in an industry is not precise. The change in the value of inventories, month-to-month as well as year-to-year, is considered to have greater significance and reliability.

Inventory data are requested from respondents by stage of fabrication, i.e., finished goods, work in process, and raw materials and supplies. There are several limitations to the quality of these data which should be noted:

a. Response to the stage-of-fabrication inquiries is lower than for total inventories because all companies do not keep their data monthly at this level of detail; those companies which do maintain detail records monthly, frequently do not have data for all three stages of fabrication or have quantity (physical volume) data only.
b. A product considered to be a finished good in one industry, such as steel mills, may be reported as a raw material in another industry, such as stamping plants. Insofar as the durable and nondurable goods sectors and also the two-digit major SIC groups contain industries with successive stages of fabrication, the same type of inventories may be included under different stage-of-fabrication categories in the aggregate statistics.

Like shipments, inventories (total and by stage-of-fabrication) are benchmarked to ASM data. The inventories reported in the M3 survey are used to bring the ASM end-of-year inventories forward each month. Even if there are inconsistencies in the M3 company or divisional level inventories by state-of-fabrication compared to the ASM establishment reports, the monthly data which are used to determine the ratios of change are consistent.

Effective with the 1982 Census of Manufactures, instructions for reporting inventories were changed. Up to 1982, as indicated above, respondents were permitted to value inventories using any generally accepted accounting method (FIFO, LIFO, etc.). In the 1982 census, LIFO users were asked to report inventories prior to the LIFO adjustment and then to report the LIFO reserve and the LIFO value after adjustment for the reserve. Because of this change in reporting instructions, the 1982 census data for inventories were published on both bases.

This change in instructions for reporting inventories has not been carried to the monthly survey. All inventory data in this report are on a book value basis, as in the ASM for 1981 and prior years. Inventory data on the new basis will be introduced in the monthly M3 survey in 1986.

New Orders Received and Unfilled Orders

Orders as reported in the monthly survey are net of cancellations received during the month on orders previously reported. They include orders received and filled during the month as well as orders received for future delivery. They also include the value of contract changes and other revaluations which increase or decrease the value of the unfilled orders to which they relate. Orders are defined to include only those supported by binding legal documents such as signed contracts, letters of award, or letters of intent, although in some industries this definition may not be strictly applicable. In the case of letters of intent, the full amount of the sales value is included if the parties are in substantial agreement on the amount; otherwise, only the funds specifically authorized to be expended are included.

Unfilled orders include orders as defined above that have not been reflected as shipments. Generally, unfilled orders at the end of the reporting period are equal to unfilled orders at the beginning of the period plus net new orders received less net shipments.

Composition of Industry Categories

The 79 industry categories used in the survey are groupings of four-digit SIC industries as defined in the 1972 Standard Industrial Classification Manual[2] as amended. The definitions are shown in appendix B.

The response rate for many of these 79 categories is not sufficient to warrant publication of the data. In addition to limitations imposed by the size of the sample, coverage is reduced for some groupings as a consequence of consolidated reporting by some multiunit companies. A company which reports on a consolidated basis (either the entire company or a division) is included only in the M3 category in which the reporting unit as a whole is classified. Therefore, in the monthly estimates, its combined activity influences only the movement of that industry category and has no influence on the movement of the other industries included in the combined report. As a result, it has been necessary to combine these 79 industry categories into 44 publication levels (16 SIC two-digit major groups or combinations of two-digit major groups plus 28 additional categories) for shipments and total inventories. In presenting orders and inventories by stage-of-fabrication, it has been necessary to introduce further combinations because of the lower response rates for those items.

Market Categories. In addition to presenting data for industry categories within the two- and three-digit SIC groups, the M3 also presents the basic data in terms of markets. These groupings are designed to distinguish between shipments of finished goods which are sold to the consumer and business markets and intermediate products which are to be incorporated in final products by other manufacturers. Such economic time series provide useful measures of isolating the impact of changes in demand in various sectors of the economy and greatly facilitate analysis of cyclical and growth developments.

Within the consumer goods category, subtotals are provided for home goods and apparel, and for consumer staples. Materials, including supplies and intermediate products, are subdivided into construction materials and all other. Equipment and defense products and automotive equipment are treated as separate market groupings. The industry composition of the market groupings is shown in appendix B.

In determining the four-digit industry composition of the basic M3 industry categories, the desirability of aggregating

[2] The SIC, as developed in the Office of Management and Budget by the Technical Committee on Industrial Classification, classifies establishments to the four-digit industry level by principal type of activity therein engaged.

data into the two-digit and three-digit SIC groups and into market categories was an important consideration. The extent to which separate tabulation categories could be formed had to be reconciled with the limits imposed by the sample and the reporting capabilities of multi-industry companies. Generally, industries within the same three-digit group were treated as a unit unless there were strong indications that a separate category could be set up for a single four-digit industry or combination of industries within the three-digit group.

The market groupings series are very valuable in the presentation of the monthly industry survey data. However, there are certain qualifications which should be considered when using the figures. The SIC system, which is basic to the monthly survey, is an industry rather than a product classification system. Plants of companies in the ASM are classified totally into industries based on their primary product specialization, and in most cases without regard to the end use of the primary product, i.e., as a finished good for the consumer or business market or as an intermediate good to be incorporated into a final product by other industry sectors. The data obtained from the monthly M3 survey reports are even more heterogeneous since the reporting units consist of combinations of plants in three- or four-digit industry aggregations.

Supplementary Series. In addition to the market categories, there are two supplementary series: household durable goods industries and capital goods industries. Household durable goods industries include household furniture; kitchen articles and pottery; cutlery, handtools, and hardware; household appliances; ophthalmic goods, watches, clocks, and watch cases; and miscellaneous personal goods. The capital goods category is subdivided into two components: defense and nondefense. Nondefense products include machinery, except electrical (excluding farm machinery and equipment and machine shops); electrical machinery (excluding household appliances, radio and TV, and electronic components); railroad equipment; and the nondefense portions of shipbuilding and tanks, communication equipment, aircraft, aircraft parts, and ordnance. Defense products include shipbuilding and tanks, communication equipment, aircraft, aircraft parts, and ordnance.

These supplementary categories are useful in bringing together industries that are subject to the influence of distinct economic forces. They generally exhibit unique patterns in their relationship of orders to shipments and inventories. Seasonal factors are developed from the historical data of the separate defense and nondefense portions of the ordnance, communication equipment, aircraft, aircraft parts, and shipbuilding and tank industries.

APPENDIX A

GENERAL INTRODUCTION

The information provided on these forms is used by the Bureau of the Census to prepare monthly estimates for over 150 industry categories in manufacturing, wholesale trade, and selected service industries. The estimates are widely used by business and government analysts. They also provide major components for estimates of the gross national product (GNP) and related series.

The purpose of this report form is to provide a single report for multi-divisional firms included in one or more of the following surveys:

- Manufacturers' Shipments, Inventories, and Orders Survey
- Wholesale Trade Survey (Current Trade Report)
- Survey of Selected Services (Current Services Report)

The first release of the manufacturing survey results is the Advance Report for Durable Goods, which is generally released about 22 days after the end of the month covered. Participating companies are entitled to receive a complementary copy of the publications. If you (or, perhaps, your marketing department) would be interested in receiving these reports, please call or write. In addition, any questions you may have about this form or the instructions may be directed to:

Bureau of the Census
ATTN: Industry Division
Company Reports Branch
Washington, D.C. 20233

Telephone: (301) 763-1524

NOTE: A detailed instruction manual is mailed each year with the January reports. If you would like additional copies, please call or write. The instructions provided below are abstracted from the more detailed manual.

INSTRUCTIONS AND DEFINITIONS

1. **Definition of the Reporting Unit** – This form should be used to report the figures for each reporting unit of your firm. A reporting unit is generally a division, subsidiary, or other operating unit as defined by your company for financial or managerial purposes. Reporting units within the same industry category, as defined in the Instruction Manual, may be combined for reporting purposes. However, the Census Bureau may request that certain large operating units be subdivided along industry lines for reporting purposes. In addition, separate defense/nondefense reporting may be requested for the communication equipment, aircraft, shipbuilding, and ordnance categories.

2. **Scope of the Survey** –All reporting units in the manufacturing, wholesale trade, and selected services categories should be reported. If this instruction creates difficulties in reporting, please contact the office listed above so that mutually satisfactory arrangements may be made.

3. **Foreign Subsidiaries** – The figures reported in this survey should be limited to domestic operations (the 50 States and the District of Columbia). While foreign subsidiaries should be excluded, transactions with foreign subsidiaries, as well as with unaffiliated customers, should be included.

4. **Intra-company Transactions** – To the extent permitted by your existing records, transactions between reporting units should be included.

5. **Survey Deadlines** – The first survey results are based on reports received through the 18th of the month following the reporting period. If possible, please return your report by this time. Otherwise, the figures for your company will be estimated for the early report, with actual figures included in the final report only. This is particularly important for the reporting units marked "MFG – DURABLE." If some of the figures can be reported early, please call or write so that arrangements for reporting of those data items on a separate form can be made.

6. **Reporting Instructions for Specific Items**

   a. **PERSON TO BE CONTACTED** – Indicate the name and telephone number of the person in your organization to be contacted about this survey. If preprinted, please check for accuracy and correct if wrong.

   b. **DESCRIPTION OF THE REPORTING UNIT** – This preprinted description is intended to describe the specific reporting unit. Any changes you wish to make in order to clarify the description may be made directly on the form. Your changes will be reflected in the future computer imprinting of the reporting unit description.

   c. **YOUR UNIT CODE** – Space is provided for a six-character code that you may assign to the reporting units. This code is intended for your use. At your request, the "Unit code" will be used to establish the sequence for imprinting the reporting units on the form.

   d. **REPORT PERIOD** – Please indicate the kind of reporting period covered (4 weeks, 5 weeks, calendar month, or other). Reports covering 4 weeks or 5 weeks or other reporting period should also indicate the ending date of the current report period.

7. **EACH OF THE 11 DATA ITEMS COLLECTED IN THIS SURVEY IS DESCRIBED BELOW. FOR MOST REPORTING UNITS, DATA ARE REQUESTED FOR ONLY SELECTED ITEMS.**

   a. **SALES** – Report net sales (or shipments) made during the reporting period. Exclude all taxes that were not included in the cost of goods you purchased. Include sales and transfers to other reporting units of your company.

   b. **NEW ORDERS** – Report net new orders received during the reporting period. Include (1) the sales value of orders received and filled during the reporting period; (2) orders received for future deliveries; and (3) the net sales value of changes to existing contracts. Do not include orders requiring further negotiations, authorization, or funding before the order is final.

   c. **ORDER BACKLOG** – Include orders, as defined above that have not yet passed through the sales account.

   d. **TOTAL INVENTORY** – Report the book value of inventories as of the end of the reporting period. The reported figure should include all inventories in the 50 States and the District of Columbia to which you hold title.

   e. **INVENTORY OF MATERIALS AND SUPPLIES** – Include all raw materials and semifabricated purchased material.

   f. **INVENTORY OF WORK-IN-PROCESS** – Include all inventories undergoing fabrication within plants of the reporting unit.

   g. **INVENTORY OF FINISHED GOODS** – Include all inventories that are ready for shipment to customer. Include goods bought for resale requiring no further processing.

   h. **LIFO INVENTORY** – Report the dollar value of inventories included in the total inventory figure that are valued on a last-in, first-out (LIFO) basis. The LIFO INVENTORY figure should be reported net of the LIFO adjustment or "reserve."

   i. **LIFO ADJUSTMENT OR RESERVE** – Report the dollar value of the LIFO adjustment or "reserve" associated with the LIFO INVENTORY.

   j. **STANDARD COST INVENTORY INCLUDED IN TOTAL INVENTORY** – Report the dollar value of inventories included in total inventory that were valued by the standard cost method.

   k. **DID STANDARDS CHANGE FROM PRIOR MONTH?** – If the standards used to value standard cost inventories in the current reporting month were revised (in whole or in part), mark (X) "Yes." If standards for the current month were the same as those used in the prior month, mark (X) "No."

8. **Special Reporting Instructions** – Please refer to the Instruction Manual for additional instructions for reporting:

   - Long-term contracts
   - Reports in the shipbuilding and aircraft industries
   - Reporting of receipts for lease or rental of products which you manufacture.

REMARKS

CERTIFICATION – This report is substantially accurate and has been prepared in accordance with instructions.

INSTRUCTIONS FOR COMPLETING THIS FORM

GENERAL INFORMATION

A summary of the instructions for completing this form is provided below. A comprehensive instruction manual is available. Copies of the instruction manual or clarification of instructions or definitions may be obtained by calling the contact on the front of the form or by writing to: **Bureau of the Census, ATTN: Industry Division, Washington, D.C. 20233.**

- **Purpose of this survey** – This form is designed to collect sales, inventories, and orders data from manufacturing companies for use in the preparation of industry estimates for 79 industry categories encompassing all manufacturing activities. These estimates are widely used as indicators of our Nation's current economic condition and of changes in the business cycle. They also provide important components for estimates of the gross national product (GNP) and related series.

- **Activities to be reported** – A REPORTING UNIT is generally a division, subsidiary, or other operating unit as defined by your company for financial or managerial purposes. Reporting units within the same industry category, as defined in the Instruction Manual, may be combined for reporting purposes. Thus, a reporting unit could also be a complete company if the company operates predominantly in a single industry category. The Census Bureau may request that very large units with diverse activities be subdivided along industry lines for reporting purposes.

  For the purposes of this survey, each reporting unit is to be reported as though a separate entity. Sales (or shipments) should include transfers to other segments of your company, as well as sales to unaffiliated customers. Orders, where applicable, should include orders from other segments of your firm. Finally, the reported figures should be limited to domestic operations (the 50 States and the District of Columbia). Please note that, while the activities of foreign subsidiaries should be excluded, export sales to and orders from foreign subsidiaries should be included.

- **Survey deadlines** – The first report for this survey is based on receipts through the 18th of the month following the reporting period. If possible, please return your report by this time. Otherwise, the figures for your company will be estimated for the early report, with actual figures included in the final report only. If some of the figures can be reported early, please call or write so that arrangements for reporting of those data items on a separate form can be made.

- **Use of estimates** – If actual figures are not available, reasonable estimates may be used for reporting. Please indicate in the "Remarks" section below if figures are estimates.

- **Comparability with previous reports** – Please indicate in the "Remarks" section below if there have been any changes in organization or accounting methods that affect comparability with previous reports.

REPORTING DEFINITIONS

(For most reporting units, data are requested for only selected items)

A. **SALES** – Report net sales (or shipments) made during the reporting period. Exclude all taxes that were not included in the cost of goods you purchased. Include sales and transfers to other divisions or subsidiaries of your company.

B. **NEW ORDERS** – Report net new orders received during the reporting period. Include (1) the sales value of orders received and filled during the reporting period, (2) orders received for future delivery, and (3) the net sales value of changes to existing contracts. Do not include orders requiring further negotiations, authorization, or funding before the order is final.

C. **ORDER BACKLOG** – Include orders, as defined above, that have not yet passed through the sales account.

D. **TOTAL INVENTORY** – Report the book value of inventories as of the end of the reporting period. The reported figure should include all inventories in the 50 States and the District of Columbia to which you hold title.

The figure for total inventories should be distributed among the following categories to the extent permitted by your records.

E. **MATERIALS AND SUPPLIES INVENTORY**

F. **WORK-IN-PROCESS INVENTORY**

G. **FINISHED GOODS INVENTORY**

H. **HAS LIFO USAGE BEEN ADOPTED OR EXTENDED THIS PERIOD?** Please mark "Yes" or "No."

I. **AMOUNT OF TOTAL INVENTORY VALUED ON LIFO BASIS** – Report the dollar value of inventories included in the total inventory figure that are valued on a last-in, first-out (LIFO) basis. The LIFO INVENTORY figure should be reported net of the LIFO adjustment or "reserve."

J. **LIFO ADJUSTMENT OR "RESERVE"** – Report the dollar value of the LIFO adjustment or "reserve" associated with the LIFO INVENTORY.

K. **AMOUNT OF TOTAL INVENTORY VALUED BY STANDARD COSTS** – Report the dollar value of inventories included in the total inventory figure that are valued using standard costs.

L. **DID STANDARDS CHANGE FROM PREVIOUS PERIOD?** If the standards used to value standard cost inventories changed from the previous reporting period, mark "Yes." If not, please mark "No."

Remarks

CERTIFICATION – This form is substantially accurate and has been prepared in accordance with the instructions.

Note: In general, the set of trading-day factors that yields the smallest residual irregular component ($\bar{I}$) after seasonal adjustment is considered preferable. Statistical tests as part of the 1962 benchmarking operation showed that for most industry shipments series, the use of the 5, 1/2, 1/2 set of daily weights yields smaller irregular component factors than other alternatives. For a few series where the 5, 1/2, 1/2 adjustment was not appropriate, weights were selected using evidence contained in the specific data series. These series are listed separately above. In addition to trading-day weights, factors are adjusted to represent 1/12 of a year.

APPENDIX D.
Seasonal Factors for Series Components for January through December 1985

Seasonal factors for new orders are not presented because new orders are not independently adjusted. New orders figures both seasonally adjusted and unadjusted are derived from the shipments for the current month and the change in unfilled orders between the current and the prior month.

Table D-1. **Shipments** (Seasonal Factors)

Category	January	February	March	April	May	June	July	August	September	October	November	December
Durable goods industries:												
Lumber and wood products:												
Wooden containers	92.6	108.8	108.1	109.8	110.2	102.2	92.0	98.2	101.7	95.1	94.5	89.0
Wood buildings and mobile homes	74.2	90.4	107.0	113.8	109.5	118.1	101.7	104.8	108.8	105.1	85.1	81.4
